EXAMINER

HO, THOMAS M

ART UNIT PAPER NUMBER

2134

DATE MAILED: 09/26/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/077,853

Applicant(s)

MONT ET AL.

Examiner

Thomas M. Ho

Art Unit

2134

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 February 2002.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-15 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. Claims 1-15 are pending.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Stefik et al., US patent 5629980.

In reference to claim 1:

Stefik (Figure 1) & (Column 7, lines 5-37) discloses a computer system comprising a first computer node coupled to a network, the first node being arranged to provide a service to a second computer node via a connection over the network; a controller for determining access to the service based upon a digital credential associated with the connection, the controller being arranged to vary access to the service over the connection in response to a change in status of the digital credential, where the first node is Repository 1, where the second node is repository 2, where the digital credential is the digital usage rights which are attached to the digital work, and where the controller is the program mechanism in Repository 1 that “checks usage rights to determine if access may be granted” (Item 105) and the status condition is the conditions with the right that must be satisfied before access is granted. In stefik, these set of conditions are

Art Unit: 2134

highly complex, as the digital credentials of each work comes in the form of usage rights comprising, rights for printing, copying, playing, etc. (Figures 15 and 18)

In reference to claim 2:

Stefik discloses a computer system according to claim 1, wherein the controller forms part of the first computer node, where the controller is program mechanism that arranges access to the service depending on the current status of the usage rights. (Figure 1, Item 105)

In reference to claim 3:

Stefik discloses a computer system according to claim 1, wherein the digital credential is an attribute credential of an entity associated with the second computer node, where the digital credential is the usage rights to a work, and where the usage rights are an attribute credential of another entity, the digital work itself. (Figure 10) & (Column 9, line 7 – Column 11, line 30, “Structure of a digital work”), and where such entity, the digital work, is associated with the second computer node, repository 2, as the item of information the user seeks to acquire.

In reference to claim 4:

Stefik discloses a computer system according to claim 1, wherein the first computer node is arranged to provide the service to a plurality of computer nodes via a plurality of respective connections over the network, where the repository is not limited to providing services to a single repository, but a plurality of them. (Figure 2, 4a, 4b)

In reference to claim 5:

Stefik discloses a computer system according to claim 4, wherein the controller is suitable for arranging digital credentials into groups, each group being associated with one or more respective secure connections to allow a user to monitor the status of the digital credentials associated with a secure connection,

where the controller is the mechanism of the repository that determines if transmission of the digital work is acceptable, and where the digital credentials(usage rights) and arranged into groups such as printing, or loaning credentials. (Column 11, lines 30 – Column 12, lines 38, “Attaching usage rights to a digital work”), and where each group is associated with one or more respective secure connections (Column 13, lines 40-50), where each connection is the various repositories and systems that the repository may connect with to transfer the digital work, where each connection is secure (Column 13, lines 25-40), and where each group is associated with each connection is established with a different requestor of the digital work, based on a different category or group of digital right. For example, a printer user seeking to print out the work would connect with the repository (Figure 4a) but would need to satisfy the PRINT group of rights (Column 12, lines 8-30) & (Column 18, lines 9-23). As another example, another repository seeking to acquire the work for display or execution (Figure 4b), would need to satisfy a different set of rights for example limited usage of the digital work in terms of metered time. (Figure 15, Item 1515) & (Column 18, lines 65 – Column 19, line 4). Other groupings of the rights include (Column 20, lines 1-40) et seq.

In reference to claim 6:

Stefik discloses a computer system according to claim 4, wherein the controller is suitable for arranging digital credentials into groups, each group being associated with one or more respective secure connections to allow the controller to control the digital credentials according to piracy, where the digital credentials are the usage rights, and the usage rights are put in place specifically to limit how the distributed content may be used in an effort to curtail piracy in that all copies of the content are controlled and “billable” (Column 6, lines 37 – Column 7, line 5) (Column 1, lines 10-25)

In reference to claim 7:

Stefik discloses a computer system according to claim 1, further comprising a digital register for listing the status of digital credentials(Figure 15); monitoring means for monitoring the digital register for changes in the status of a digital credential, wherein the controller is responsive to the monitoring means for varying access to the service in response to a change in status of the digital credential, where a change in the status of the digital credential rights can be made in the addition of usage rights (Column 11, linesn 30 – Column 12, lines 40) or by a change in the repository security level (Column 15-16), and the controller is responsive to the monitoring means by the enforcing of the user rights) (Column 6, lines 37 – Column 7, line 5) & (Column 26, lines 38-47), and

Claim 8 is substantially similar to claim 1 and is rejected for the same reasons.

Art Unit: 2134

Claim 9 is substantially similar to claim 4 and is rejected for the same reasons.

Claim 10 is substantially similar to claim 5 and is rejected for the same reasons.

Claim 11 is substantially similar to claim 6 and is rejected for the same reasons.

Claim 12 is substantially similar to claim 1 and is rejected for the same reasons.

Claim 13 is substantially similar to claim 1 and is rejected for the same reasons.

Claim 14 is substantially similar to claim 1 and is rejected for the same reasons.

Claim 15 is substantially similar to claim 6 and is rejected for the same reasons.

Conclusion

4. The following prior art not relied upon is made of record.

- US patent 5560008 uses a system of server credentials for client access to a service from the server.
- US patent 5611048 is a system the remotely administers passwords for a computer network among a plurality of nodes.
- US patents 6449739, 6564342 are methods where clients or users may monitor the status of the server.

5. Any inquiry concerning this communication from the examiner should be directed to Thomas M Ho whose telephone number is (571)272-3835. The examiner can normally be reached on M-F from 9:30 AM - 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Application/Control Number: 10/077,853
